

NOCTI Improvement Plan

Administrators: If some of your teachers need to improve their NOCTI scores, here is a process that could help. It's not only for those teachers who have students scoring in the basic level. If a teacher's students are always in the competent range, a process such as this can move them into the advanced range.

This resource is a step-by-step process developed to improve student achievement in the NOCTI assessment. The resource uses the reports available through NOCTI (teachers have access to these reports) to have the teachers and the students analyze the data and then plan to improve scores based on that data. It also contains a list of recommendations on how to prepare the students for the assessment.
