Comparison of NOCTI Pre-Test and Post-Test Results

Compare the results of the NOCTI Pre-test and Post-test results for the same year. Look for all areas in which the majority of the students failed to improve their scores, or their scores fell from the Pre-test results. List any standards and competencies that were found to be below 50% or any area where scores declined. The final column should list something about what was found such as scores dropped from pre-test; only one student improved in this area; had not covered this area yet in curriculum; etc.

Pre-test Standard	Pre-test Competency	Pos-test Standard	Post-test Competency	Comments on analysis
